

Pest control

protikār is a software for preventing plant diseases, weeds and pest organisms that damage agricultural crops.

protikār offers knowledge based and customized information to the farmers on:

- Preventive measure to avoid plant diseases
- Specific pesticides recommendations, quantities, dosage and application procedure
- Pesticides available at local sources
- Enabling farmers to produce better crops and reduce harmful effects of using excess pesticides

Features of protikār include:

- Details of local curative and preventive solutions, and their providers
- Dynamic customization makes solutions relevant around the globe
- Comprehensive database tracks records
